

# ADJUSTAGUARD

AdjustaGuard allows operators to pivot between meal service styles at an affordable price point. The elevation and angle of each glass panel is independently adjustable. Users can create shelves and pass throughs for self-service dining and move the glass to 90° vertical positioning for full-service operations.

The distinctive bent tube frame construction offers a durable, streamlined look designed to withstand the rigors of repeated use. Coupled with the unique E-Track bracket system, the hardware incorporates seamlessly into any aesthetic by attaching vertical tracks to the posts on the operator side. For straight run serving line projects that require flexibility and value, look no further than AdjustaGuard.

## BENEFITS:

- Ideal for high volume dining operations that want the flexibility of adjustable guards at a competitive price.
- Easily adjusts for simple transition between self and full-service dining.
- Guard style offers clean lines without sharp edges or obstructive hardware, making your culinary creations the focus.
